Self Learning 3

Explain the reason behind your choice and show documentation that you really perform the process model on your project.

- In developing the DialoQ website, we have opted to employ the agile model with the Scrum method as the basis for our team's work.

  We chose this method because we think that this method will help us produce a good website for our clients. This method will enable us to deliver a high-quality website that exceeds our clients' expectations. The Scrum method's flexibility accommodates changes and additions to requirements throughout the website development process, ensuring that the final product aligns with our clients' evolving needs. This method also has structured stages and has an iterative system so that if our website does not match what the client wants, we can visit and refine previous stages based on client feedback, ensuring that the DialoQ website consistently reflects our clients' vision.

- Our Roles :
  Product Owner
  - Delvin Setiamin Salim
  - Ferren Andrea
  - Gladys Jessica Ruslim
  - Javier Justin
  - Kezia Revalina Tan

  Scrum Master

  - Javier Justin
